Abhiyantri Setu

Status before going live

Build, Renovate, Repair & Maintain — All in one trusted platform
Greater Noida · Report date 14 November 2026

3	40	132	~6 weeks
apps: customer, partner, admin (+ website)	screens shown in this report	automated tests passing	to a pilot launch

In short: the product is feature-complete for a Greater Noida pilot. Every main flow — booking, quotes, hiring, milestone payments, partner KYC, admin operations — works end to end on test services. What remains is mostly going live: real SMS, payments and WhatsApp accounts, production hosting, Play Store release, legal text and onboarding real partners.

1. What is done

Area	Working today
Accounts and security	OTP login by mobile; one device per partner; instant session cut-off; rate limits; DPDP consent screen with separate WhatsApp and marketing choices; account deletion; security review fixes.
Home services (instant booking)	Fixed-price service menu, cart, time slots, choose your own professional or let Setu assign, partner accepts, "on the way" and live status, start code, reschedule.
Quotes for bigger work	Post a requirement (repair, renovation, professionals, materials, equipment), matching to verified pros nearby, up to 5 chosen pros, quotes, negotiation, hire.
Project milestones (Setu Safe)	Payment stages from the quote; customer funds each stage, partner marks it ready with photos, customer approves or asks for fixes.
Payments and money	Razorpay integration (test gateway now), double-entry ledger, automatic refunds on cancellation, extras the customer approves, partner payouts recorded by finance.
Materials and equipment	Material request for quotes (RFQ) and equipment rental with market rates and estimates.
Find a professional	Architects, structural and civil engineers, interior designers, Vastu consultants; shortlist and request proposals.
Growth	Refer and earn (₹250 each), care plans / AMC, societies and builders requests, waitlist from the website.

Partner app	Dashboard with online switch, leads with one-tap quote and budget check, jobs, earnings and payouts, KYC documents with expiry tracking.
Reviews and trust	Photo uploads, verified-hire reviews, before/after photos, report a professional, trust & safety desk.
Notifications	WhatsApp lead alerts with buttons, push notifications, in-app inbox (templates ready, need Meta approval).
Setu AI and calculator	Assistant in English, Hindi and Hinglish; house build and painting cost calculator.
Admin panel	Overview, partners verification, documents, matching queue with rescue, trust & safety, disputes, jobs, payouts, refunds, ledger, funnel & supply, pilot sectors, waitlist, catalogue, users, audit log.
Website	Next.js site with quote form, services, Setu AI, 3D scenes, SEO city pages, waitlist.
Languages and design	726 screen texts in English, Hindi and Hinglish; navy and orange brand look in both apps.
Quality	132 automated API tests passing; typecheck and lint clean; each feature checked end-to-end in a browser.

How it was checked: each feature has API tests and was run in a real browser (customer, partner and admin together). All screenshots in this report were taken from the running apps on 14 November 2026 with test data.

2. What is pending before going live

Item	Why it matters / status	Work days	Waiting time
SMS OTP live (MSG91 + DLT registration)	Today codes only appear in server logs.	**2**	1–2 weeks DLT approval (external)
Razorpay live account + KYC	Payments run on the test gateway.	**1**	1–2 weeks Razorpay review (external)
WhatsApp Business templates approved	Lead alerts are logged, not sent.	**1**	3–10 days Meta approval (external)
Production hosting (AWS Mumbai): database, Redis, file storage (S3), domain, SSL, backups, monitoring	Render test copy is blocked (API key 401); production not set up.	**5**	
Push notifications (Firebase / Expo) and Setu AI key	Needed for real device alerts and the assistant.	**1**	
Android release: real-device testing, Play Store listing and review	APK builds exist; store release not done.	**5**	Play review 3–7 days
iOS build and App Store (optional for pilot)	Not started.	**5**	App Store review 2–7 days

Legal pages: Terms, Privacy, Refund policy, partner agreement; GST invoicing check	Text needs a lawyer's review.	**3**	lawyer time
Fix: supply table counts open requests by category, not trade	Known bug in Funnel & supply.	**0.5**	
Browse before login (Flow Book A05)	Customers must log in first today.	**2**	
Home screen layout to match the new mockup (6 tiles, offer banner, My activity / Updates tabs)	Colours and tagline done; layout not yet.	**3**	
Automatic partner payouts (RazorpayX)	Payouts are recorded manually by finance.	**4**	optional for pilot
Field agent tools	Not built.	**4**	optional for pilot
Load test, security check and bug-fix round	Before real customers.	**4**	
Pilot set-up: real prices in the catalogue, live sectors, onboard and verify 30–50 partners	Operations work, runs in parallel.	**—**	2–4 weeks (ops team)
Remove sample data and test accounts	Dev database has test users and jobs.	**0.5**	

Not planned for launch: lead credits (partners pay to unlock leads) were left out on purpose; Setu earns from the job instead.

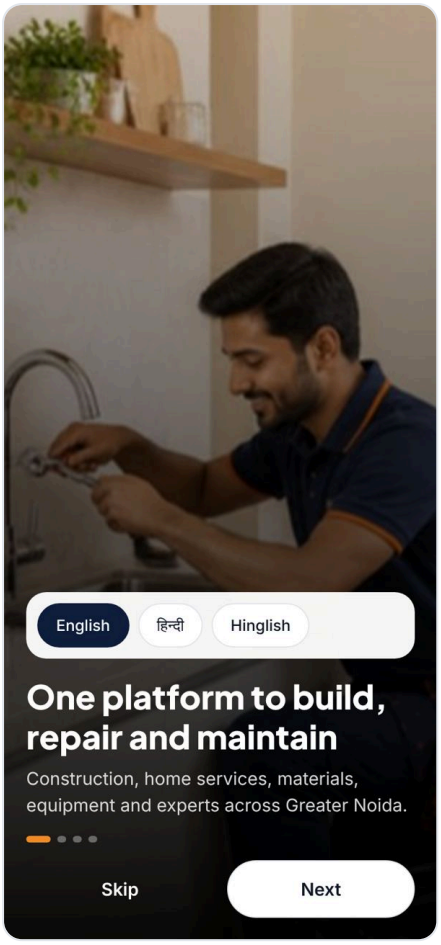

3. How long it will take

Week	Work
Week 1	Apply for MSG91 DLT, Razorpay live, WhatsApp templates, Play developer account (all wait in parallel). Set up AWS Mumbai production, domain and backups. Fix supply count, remove sample data.
Week 2	Home layout to new mockup, browse before login. Push notifications and Setu AI key. Legal pages to lawyer.
Week 3	Switch on live SMS, payments, WhatsApp as approvals arrive. Real-device testing on Android phones. Load test and security check.
Week 4	Bug-fix round. Play Store listing and submission. Ops: real catalogue prices, live sectors, start onboarding partners.
Week 5–6	Closed pilot with friendly customers in 2–3 sectors and 30–50 verified partners. Fix what the pilot finds, then open the pilot to the public.

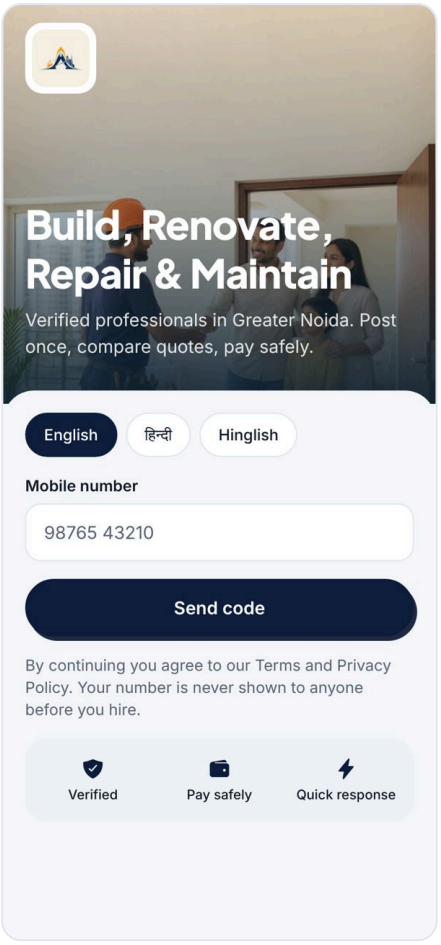

Estimate: about **25–30 development days** plus external approvals running in parallel, so **5–6 weeks to a closed pilot** and **6–8 weeks to a public Android launch**. iOS, automatic payouts and field-agent

tools add about 2–3 more weeks if needed for launch. The biggest risks to the date are DLT and Razorpay approval times and how fast partners can be verified.

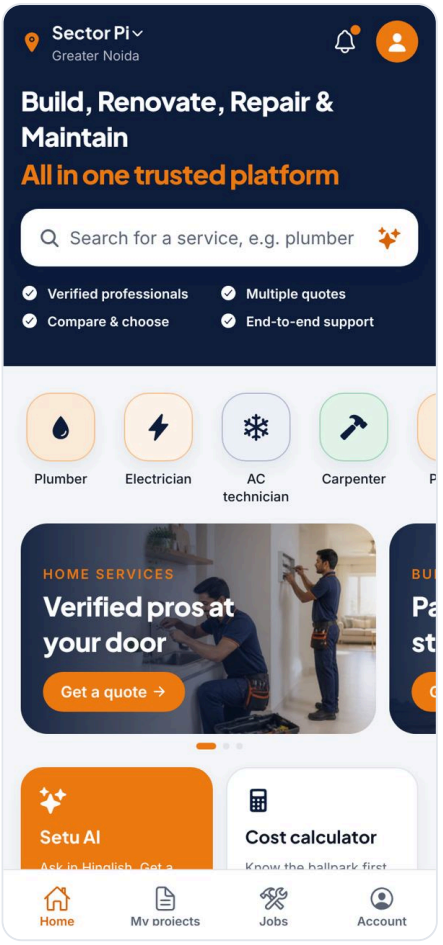

4. Customer app — screens

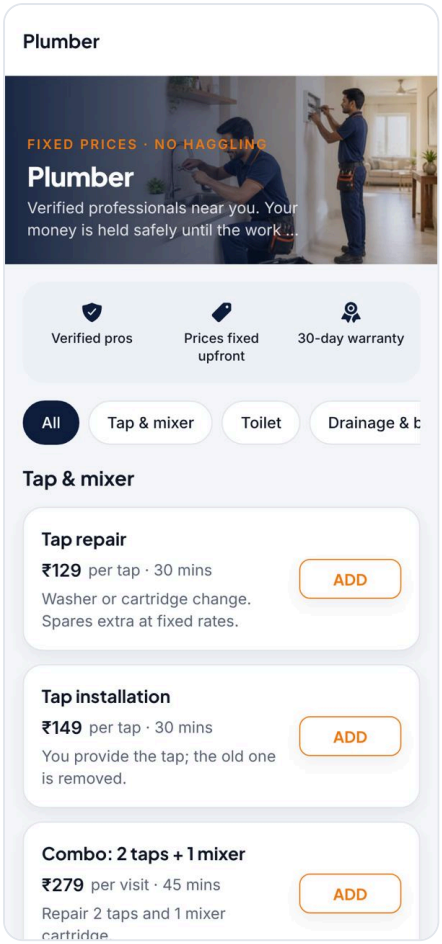

Welcome slides
First open: what Setu does, language choice

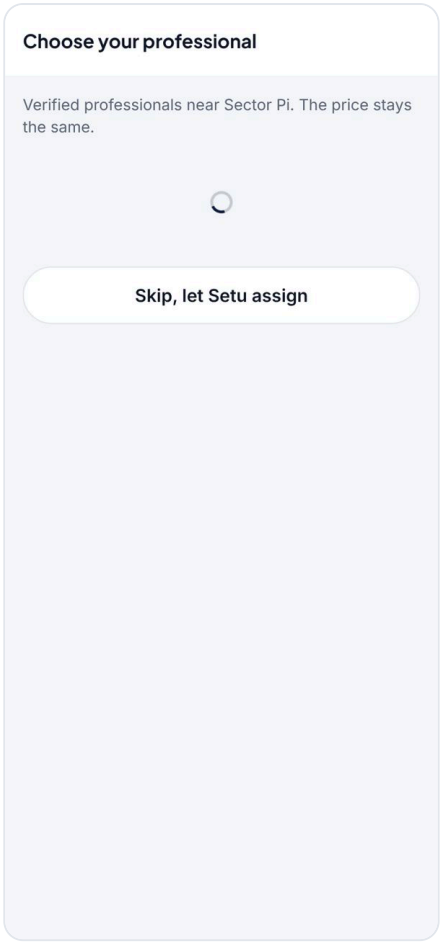

Login
Mobile number + OTP, English / हिन्दी / Hinglish

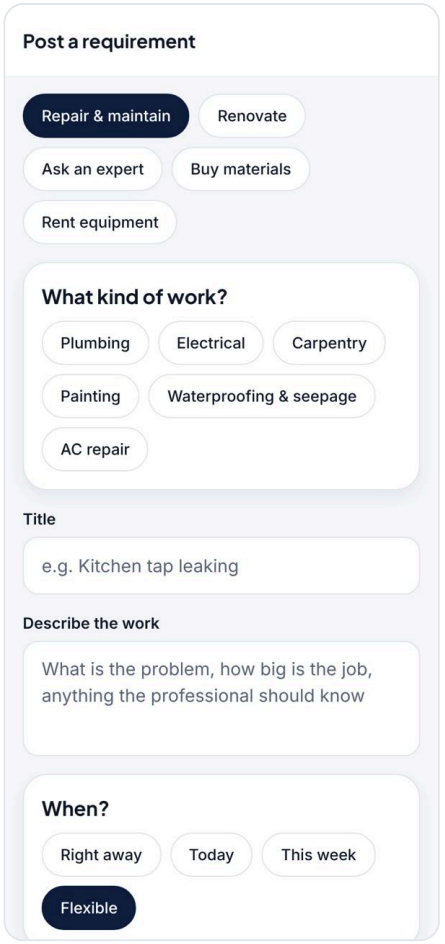

Home
Tagline, search, trust points, categories, offers

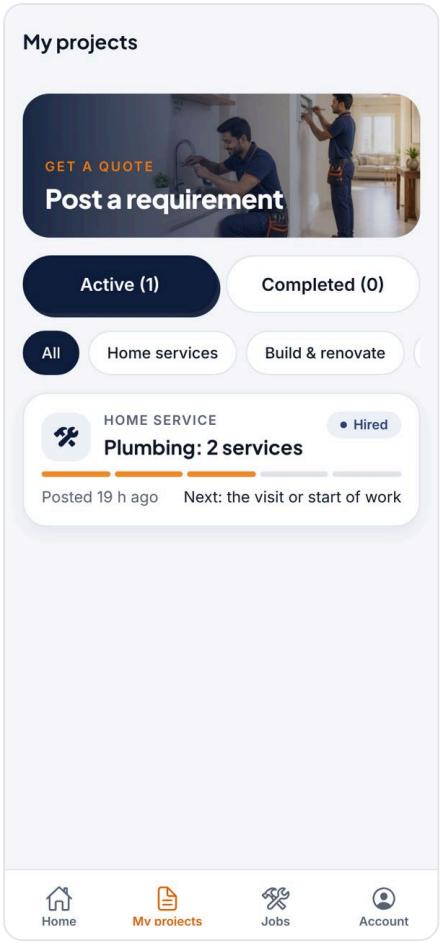

Book a service
Fixed-price menu with cart (e.g. plumber)

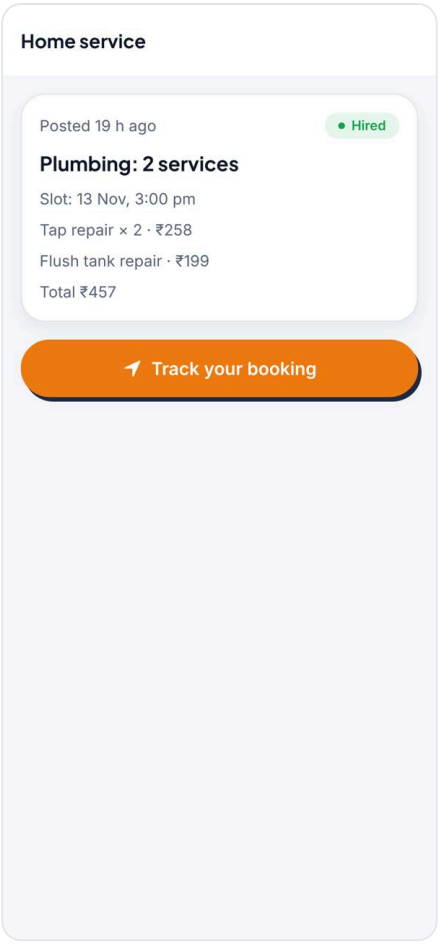

Choose your professional
Pick a verified pro, or let Setu assign

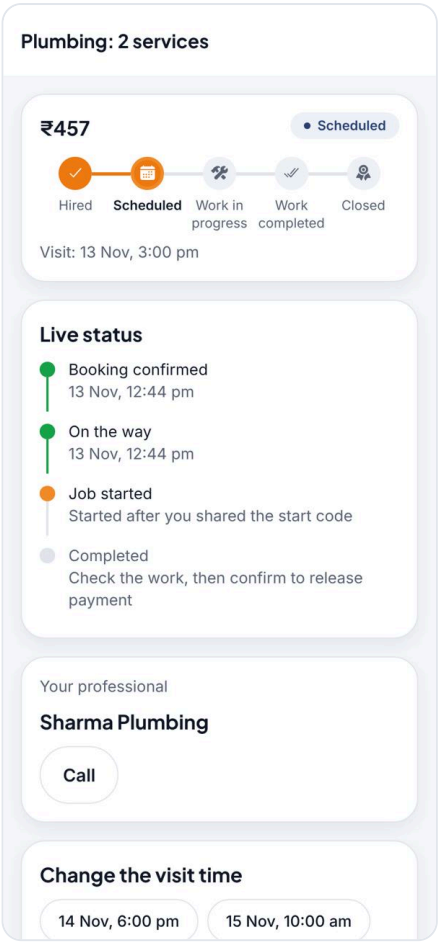

Post a requirement
Repair, renovate, expert, materials, equipment

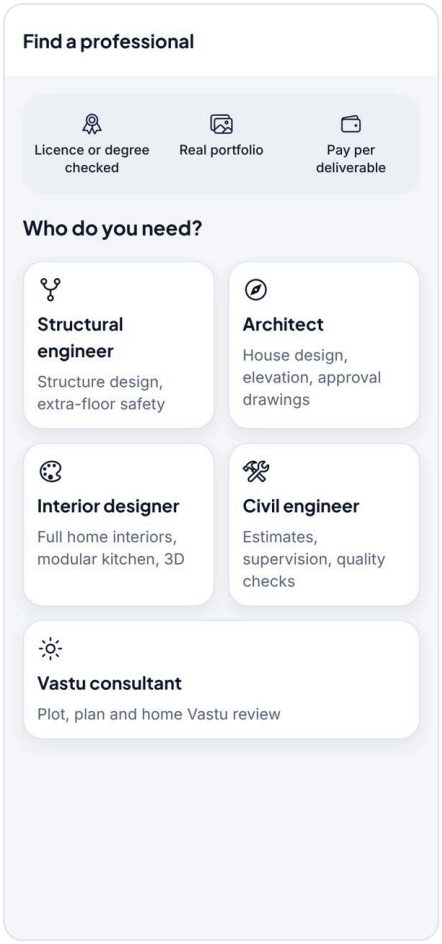

My projects
Every request with one lifecycle bar

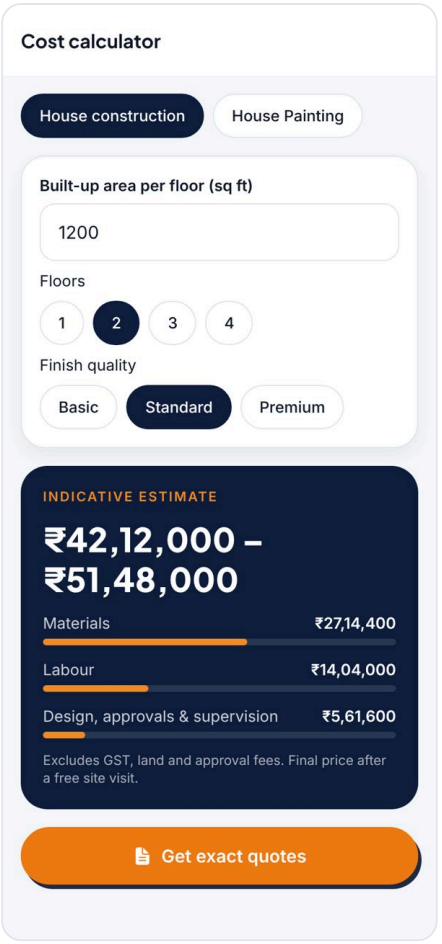

Request detail
Booking items, slot, track booking

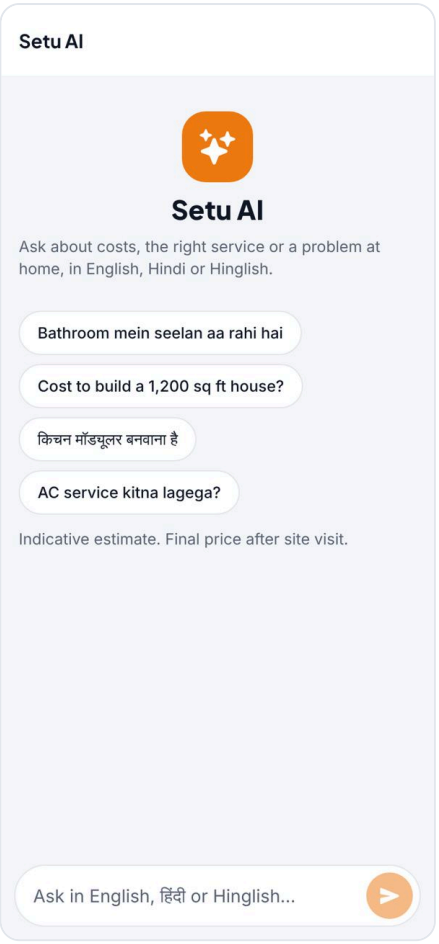

Job tracking
